Professional Experience

Software Development Engineer I (SDE1)

Tech Exponent Systems Pvt. Ltd.

July 2025 – Present

- Engineered a Labelling Management System (Node.js/Express, React, PostgreSQL) for ML training data collection, supporting annotation workflows and structured dataset pipelines.
- Built a Voice Agent for car booking using Claude LLM APIs and Exotel integration, enabling real-time AI-powered call handling and query resolution.
- Built a machine learning pipeline using LSTM networks and FinBERT for sentiment-driven financial time series forecasting, integrating the model as a REST API service.

Software Development Engineer Intern (SDE1)

Tech Exponent Systems Pvt. Ltd.

July 2024 – July 2025

- Engineered a Labelling Management System (Node.js/Express, React, PostgreSQL) for ML training data collection, supporting annotation workflows and structured dataset pipelines.
- Built a Voice Agent for car booking using Claude LLM APIs and Exotel integration, enabling real-time AI-powered call handling and query resolution.
- Built a machine learning pipeline using LSTM networks and FinBERT for sentiment-driven financial time series forecasting, integrating the model as a REST API service.

Project Works

FinAgen – AI-Powered Personal Finance Chatbot — Python, FastAPI, Gemini Flash 2.5, ChromaDB, MySQL, Docker, RAG, SSE

- Built an AI chatbot using Retrieval-Augmented Generation (RAG) to resolve **1,000+ complex business queries** over invoice documents with over 92% response accuracy.
- Designed a document ingestion pipeline with **OCR-based PDF extraction** and text chunking (~512 tokens), improving **semantic retrieval efficiency by 35%**.
- Integrated ChromaDB vector store with HuggingFace Sentence Transformers for top-k similarity search, reducing LLM hallucination by 22%.
- Engineered an LLM orchestration layer using Gemini Flash 2.5 for dynamic context retrieval, reducing end-to-end **response latency by 25%**.

Bitcoin Price Prediction System — Python, TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib

- Trained an LSTM-based deep learning model on **10000+ historical Bitcoin data points** (OHLCV) for sequential price trend forecasting.

- Built a robust data preprocessing pipeline with feature engineering on time series data, optimising **batch processing** to reduce training time by 20%.
- Achieved 85% mean absolute error on the evaluation dataset using TensorFlow and Scikit-learn.

EduHub – Educational Content Management System

— Python, Django, HTML5, CSS3, JavaScript, SQLite

- Architected a full-stack web application using Django, implementing 4+ functional modules including course management, file uploads, and content scheduling.
- Engineered role-based authentication for 3 user types (Admin, Instructor, Student) with secure session management.
- Optimised database interactions using Django ORM and SQLite, achieving 40% faster page rendering.

Technical Skills

Languages: Javascript, Python 3

Backend: NodeJS / Express JS, FastAPI

Frontend: React, Tailwind

LLMs: Open AI, Anthropic Claude, llama2, RAG, Tool Calling.

Databases: Postgres, MongoDB, ChromaDB

Cloud and Devops: AWS EC2, S3, Docker

Productivity: Claude Code

Certifications

MERN Stack Development - 100Xdev

Java Standard Edition - Solitaire Infosys Pvt. Ltd.

Education

B.Tech – Computer Science & Engineering

Global Group of Institutes, Amritsar 8.0/10
